

Introduction

Welcome! This newsletter of the **3Ccar** consortium gives a glance on the progress of the project as well as the dissemination events and other activities.

Events

ECSEL JU Symposium "Shaping Digital Innovation"
19-20 June 2018

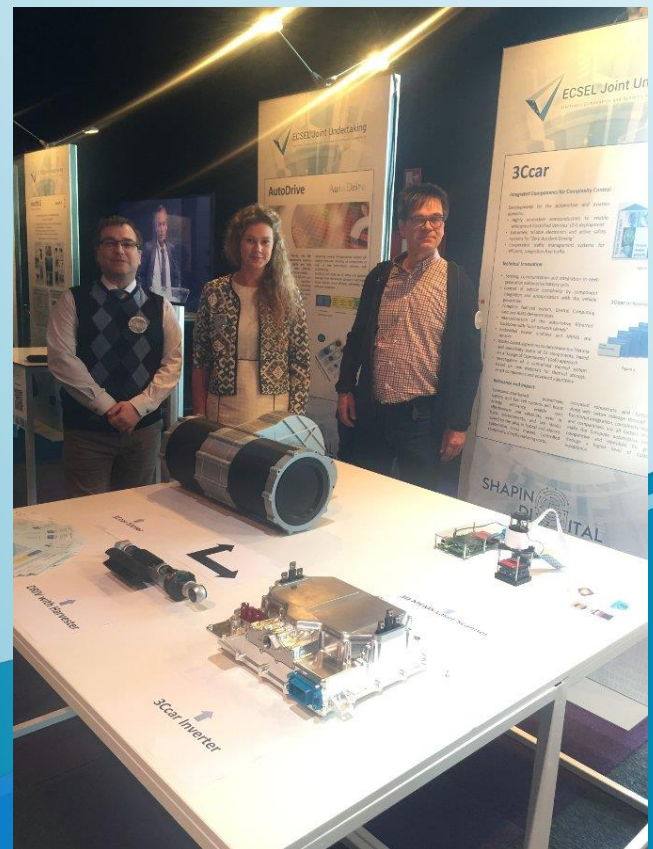

3Ccar and AutoDrive projects were presented during the ECSEL JU Symposium 2018 'Shaping digital innovation' at the common project booth with four technology demonstrators: **3Ccar Motor, Inverter, Harvester, and 3D MEMS Laser Scanner**. The Symposium gathered a wide range of European and global stakeholders in the Electronics Components and Systems field, including industry, research and financial communities, policy decision-makers, and key opinion leaders.

Our booth display received plenty of attention and incited some interesting discussions. 3Ccar and AutoDrive partners presented the technological demonstrators and their advantages; booth visitors also got a chance to see the project videos and learn about the projects from the updated posters and leaflets. This Symposium provided a unique opportunity and space for our project to present the progress and results to date, to disseminate our technological achievements, and to show our contributions to the programme.

3Ccar project booth at ECSEL JU Symposium 2018:

Upcoming Events

- ✔ 3Ccar 3rd review preparation meeting in Graz
- ✔ Vilnius Gediminas Technical University's event "Science Explorers' Night"
- ✔ EFCS2018
